

## BUSINESS CLIMATE MONITOR NOVEMBER

The *IJG Business Climate Monitor* recovered by 0.27 points in November 2016 to a level of 51.08 points. The index has been on a downward trend since June 2015, but this appeared to have started to stabilise in November 2016. Of the 31 indicators measured by the index, 13 showed deterioration over the past year, while the remaining 18 indicators showed improvement.

As previously expected, and as suggested by both the leading and overall index, Namibia went into recession following contractions in Q2 and Q3 of 2016. Whether this contraction will be prolonged or not remains to be seen. However, slow improvement in the high frequency indicators suggests it may be short lived. Nevertheless, major adjustments in the construction industry, largely due to a slowdown in FDI inflows and fiscal infrastructure spending cuts, mean that strong growth is unlikely within the next six to 12 months.

With 2016 being the third drought year in four years, water-heavy industry and agricultural production have found themselves under severe pressure. The year saw a 31.1% decline in livestock marketed when compared to 2015. Major inventory drawdowns were seen in 2013 and 2015 as a result of the droughts in those years, resulting in abnormally low volumes available for sale in 2016 despite the drought. As such, the national herd was expected to be at or close to record low levels as the 2016/17 rainy season got underway.

Largely as a result of the major constraints in the supply of livestock to abattoirs, and despite less abattoir capacity as a result of water challenges, both beef and lamb prices increase notably through 2016, with the beef price rising 11.6% over the 2015 average price. Similarly, the average lamb price across 2016 rose 6.7% when compared to 2015.

## Note on methodology

The index encompasses 30 indicators, selected from available high frequency data. These are split into five broad categories, namely: policy environment, primary sector output, secondary and tertiary output, external account and pricing. Given the available high frequency data, these categories provide the best available high frequency insight into developments in the local economy and business cycle.

The raw data are adjusted and transformed for seasonality, inflation and exchange rate as appropriate. In addition, the data are adjusted to factor in whether higher or lower values are desirable (for example higher government spending is positive for the business climate, while higher interest rates are negative).

In order to develop a stationary indicator (i.e. not trending up or down), and to show dispersion from a mean value, the common PMI (Purchasing Managers' Index) approach has been slightly adjusted and utilised. This approach sees transformed indicators that are contracting over a 12-month period given a value of 0, while unchanged indicators are valued at 50 and expanding indicators valued at 100. The average value across the 30 indicators is then taken, with an overall value of over 50 implying expansion in the majority of indicators, while a value below 50 shows contraction in the majority of indicators. In addition to the level, the trend of the BCM line illustrates whether indicators are generally improving or deteriorating. A 12 period moving average is then used to smooth the indicator and ensure that short term volatility or base effects do not provide a misleading view of the local business climate.

When compared to the historic business cycles, this approach gives very a very satisfactory high-frequency view of the state of the local business climate.

## **Indicators**

| Indicator                         | Higher Value Better    | Transformation      | Leading |  |  |
|-----------------------------------|------------------------|---------------------|---------|--|--|
| Policy Environment                |                        |                     |         |  |  |
| Prime Rate                        | No                     | None                | Yes     |  |  |
| Monthly Government Spending (N\$) | Yes                    | Deflated            | Yes     |  |  |
| Primary Sector Output             |                        |                     |         |  |  |
| Livestock marketed (#)            | Yes                    | Seasonal Adjustment | No      |  |  |
| Copper Production (tons)          | Yes                    | None                | No      |  |  |
| Gold Production (kg)              | Yes                    | None                | No      |  |  |
| Diamond Production (000' carats)  | Yes                    | None                | No      |  |  |
| Uranium Production (short tons)   | Yes                    | None                | No      |  |  |
|                                   | Secondary and Tertiary | Output              |         |  |  |

| Building Plans Completed (N\$)       | Yes      | Deflated, Seasonal Adjustment | No  |
|--------------------------------------|----------|-------------------------------|-----|
| Building Plans Approved (N\$)        | Yes      | Deflated, Seasonal Adjustment | Yes |
| Tourism Arrivals (#)                 | Yes      | Seasonal Adjustment           | No  |
| Passenger Vehicle Sales (#)          | Yes      | Seasonal Adjustment           | No  |
| Commercial Vehicle Sales (#)         | Yes      | Seasonal Adjustment           | No  |
| Credit Extended to Individuals (N\$) | Yes      | Deflated, Seasonal Adjustment | No  |
| Credit Extended to Businesses (N\$)  | Yes      | Deflated, Seasonal Adjustment | Yes |
| CC Registrations (#)                 | Yes      | Seasonal Adjustment           | Yes |
| Company Registrations (#)            | Yes      | Seasonal Adjustment           | Yes |
| Defensive Name Registrations (#)     | Yes      | Seasonal Adjustment           | Yes |
|                                      | External | Account                       |     |
| Imports (N\$)                        | No       | Deflated, Seasonal Adjustment | Yes |
| Exports (N\$)                        | Yes      | Deflated, Seasonal Adjustment | No  |
